

Originating System - VA

Here is how we are using "originating system".

In LOM IEEE,

Technical.requirement(.orComposite).type field

Explanation: Type of Requirement (select from drop-down)

Vocabulary: Browser; Operating System; Originating System; Player Viewer

We would then use the Technical.requirement(.orComposite).name field as the name of requirement (in this case, the name of the Originating System).

This is followed by the minimum- and maximumversion fields to be used as needed.

(Note, the IEEE vocabulary for type includes operating system and browser only.)
