

MedBiquitous Public Comment Forum

The MedBiquitous Public Comment Forum provides a place for public comment on any efforts by the MedBiquitous program that do not reside in another space (for example, ANSI Standards Action).

The MedBiquitous Community is comprised of individuals across the health professions and globe passionate about the need for open education data standards. Participants from industry, academia, and government organizations alike are welcome.

The health professions are undergoing many changes during the digital transformations of higher education, continuing education and healthcare. Standards are a key element of the infrastructure that is essential to track clinical education and training, measure its efficacy, integrate education and improvement resources with systems at the point of care, deploy online courses in different environments, and link education and performance data to core competencies and curricula. Technology standards also provide the opportunity for organizations to work together in new and innovative ways.
