

# Element name changes to reflect XPath

These changes would occur to represent the fact that with XPath, the elements named below will not contain IDs but rather Xpaths to file locations that contain the required data. It was suggested to replace "ID" with "Path" or "Ref". So "MediaID" would become "MediaPath" or "MediaRef". ItemID would become "ItemPath" or "ItemRef" etc.

## virtualpatientdata.xsd

- **MediaID** under Media (this element is present in InterviewItem, PhysicalExam, DiagnosticTest, Diagnosis, Intervention)

## dataavailabilitymodel.xsd

- **ItemID** and **DAMNodeID** under DAMNodeItem

## activitymodel.xsd

- **CounterID** under CounterActionRule
