

Version 2 Changes

If you have recommendations for updates or changes to Healthcare LOM version 2, please add them here.

- In the meta-metadata field there was a reference indicating conformance to ADL. The healthcare along specification needs to take out that reference.
- SCORM no longer checks for mandatory elements. Implementation guides and scorm for healthcare should be updated.
- Please see [options for incorporating references in Healthcare LOM](#).
- See [educational context spreadsheet](#)
- [PI CME discussion](#)
