This is the basic model for the data that feed into the World Directory:

All relationships are many-to-many. The Accrediting Agencies aren't yet included in the public data, but we're planning to introduce them to the World Directory in the future. The agency-school and agency-program relationships could also be treated as a separate entity with attributes for status (full accreditation, on probation, etc.) and start/end dates.

Most of the details one would want to know about a medical school/program (admission requirements, curriculum duration, language of instruction, degree title awarded, etc.) are associated with the Program entity in our model. The few attributes associated with the School entity include contact information, prior names, academic affiliations (the school-school relationship), and non-academic affiliations (e.g., religious affiliation). Programs and schools each have their own operational statuses and start/end dates.

If you have any questions or need any more details, please let me know.

Amy

Hi, Amy. You had indicated on our Program API call that you would share a data model for the FAIMER directory and for schools. Could you share that with us?

Thank you!

Hope all is well,
Valerie
