

Document demographics and other types of data for use as paradata

Use case title
 Author
 Organization

ID	An ID unique within this working group
Title	Title that summarizes the user's goal in the use case, for example, "Searching for learning at the point of care."
Actors	Learner LRS Instructional system
Trigger event	The learner interacts with an activity that is designed to capture paradata.
Success end condition	The learner data is recorded as paradata.
Assumptions	The activity is designed to record paradata. The paradata is available.
Description	Write a step by step narrative description of how the user and system interact to achieve the end goal. This doesn't have to be technical, it just describes what you want the technology to do for you.
Transaction	What are the important system to system transactions that might require standards?
Exceptions	What happens if things go wrong?
Potential Standards	If a particular transaction points to the need for a data exchange standard, give a general title for that standard here.
