

Use Cases

Matt has prepared an analysis of using [XAPI with virtual patients](#).

Some potential use cases that would link in with using XAPI for reporting. How these VP's might be actually shared in practice is an authorization and Content Brokering Issue.

[XAPI01](#) - Sharing a case from Clinical Practice with an Educational Institution

[XAPI02](#) - Sharing a case written by an Education Institution with Clinical Practice

[XAPI03](#) - Reporting on Virtual Patient Type Activities from systems that do not support the standard

[XAPI04](#) - Analyzing the effect of a Virtual Patient Case in context

[XAPI05](#) - Recording a group of learners playing through a VP collaboratively and linking that video to learning record

[XAPI06](#) - Videoing an individual's progress through a VP for qualitative analysis

[XAPI07](#) - Playing a series of linked VP cases over a period of time

[XAPI08](#) - capturing and analyzing the learning context around a VP case

[XAPI09](#) - tracking a change to recommended practice and invalidating competency record

Possible basis for VP specific community profile
